- Create a Redirect Rule

The screenshot shows the Cloudflare Rules Overview page for the domain `anderslaw.ca`. The page is titled "Rules Overview" and includes a search bar and a "Show all rule types" dropdown. A table lists various rule categories, with "Redirect Rules" being the only one with an active rule. The active rule is "Redirect to a different domain [Template]" with order 1 and match against "Hostname equals anderslaw.ca". A dropdown menu is open, showing options like "Redirect or route requests", "Transform requests or responses", and "Modify Cloudflare configurations and behaviors".

Annotations in red text and arrows:

- "1- Rules -> Overview" points to the "Overview" tab in the left sidebar.
- "2- Click -> Create Rule" points to the "+ Create rule" button in the top right.
- "Select Redirect Rule" points to the "Redirect to a different domain [Template]" rule in the table.

- Edit the Rule

- Expression -> `concat("https://gtrlaw.ca", http.request.uri.path)`

Rule name (required)

Redirect to a different domain [Template]

Give your rule a descriptive name.

If incoming requests match...

- Wildcard pattern
Only apply the rule to requests matching the wildcard pattern
- Custom filter expression
Only apply the rule to requests matching the custom filter expression
- All incoming requests
Apply the rule to all requests

When incoming requests match...

Field	Operator	Value		
Hostname	equals	anderslaw.ca	And	Or

e.g. example.com
